

**AVOID THESE MISTAKES
WITH LEGENDARY
GAMEPLAY TECHNIQUES**

✗ Mistake #1: Sprinting Out of Every Door Without Checking

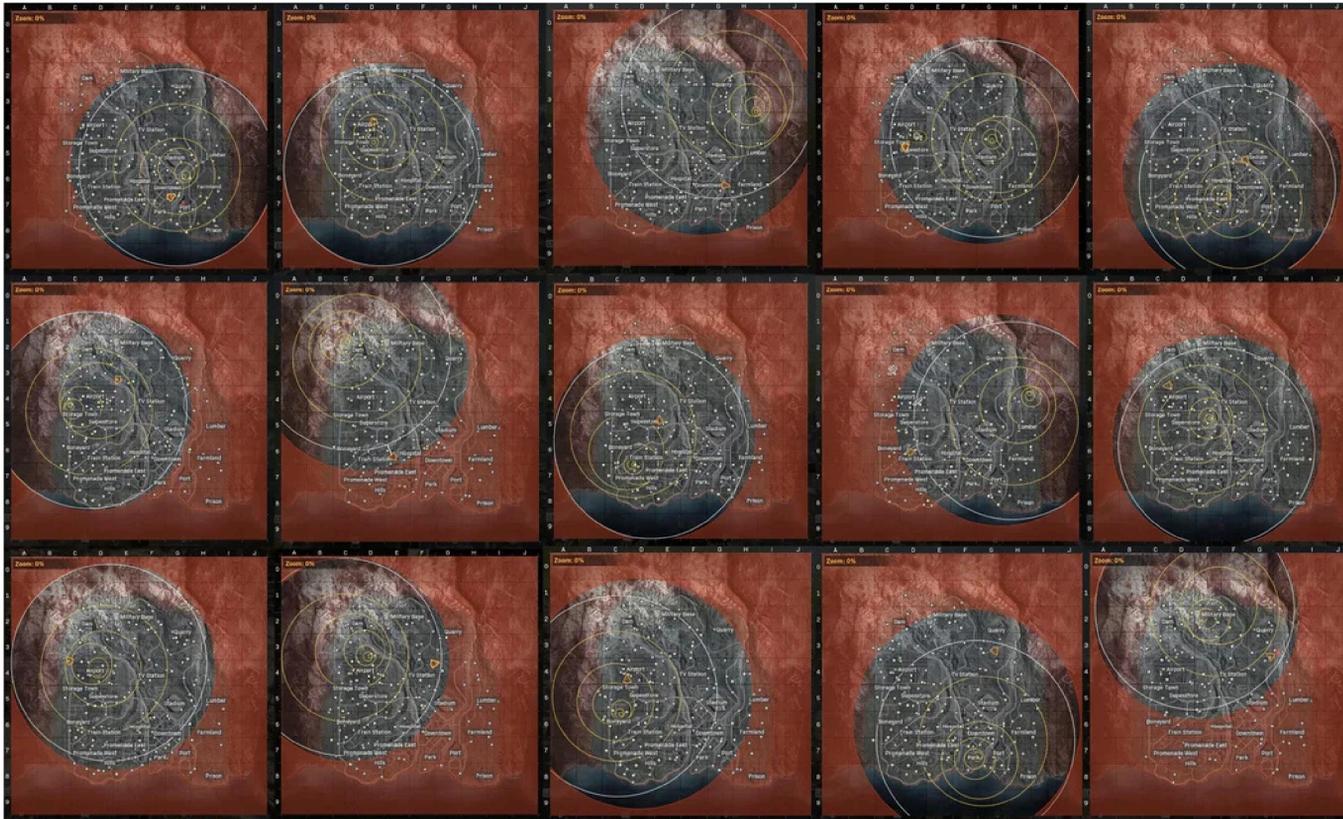

What casuals do:

They sprint straight through doors, expecting no one – and run straight into pre-aims or claymores.

What pros do:

They quick-check corners, jump peek, pre-aim exits, or open from the side to throw off enemy angles.

🎯 **Running through a door is like announcing “I’m free KP!”**

✘ Mistake #2: Not Abusing the First Circle for Setup

What casuals do:

They run aimlessly, loot for too long, or chase early fights with no map control.

What pros do:

They use the early game to build cash, prep a loadout, grab info from contracts, and rotate smart.

🎯 **The match is won in first circle. Most just don't know it.**

✗ Mistake #3: Overusing Bunny Hops in Predictable Ways

What casuals do:

They spam jump the same way into rooms, corners, or 1v1s – and get shredded mid-air.

What pros do:

They vary timing, direction, and height – using bunny hops to displace, not decorate.

🎯 Predictable movement is just animation practice for your enemy.

✗ Mistake #4: Landing Without Checking UAV Towers or Pings

What casuals do:

They land blind – no pings, no UAV tower, just vibes – and get ambushed while looting.

What pros do:

They buy UAVs, use tower pings, or land near live pings to pre-read enemy positions.

🎯 **You can't win Rebirth if you land like you're sightseeing.**

✘ Mistake #5: Letting Gunfights Drag Too Long

What casuals do:

They take extended fights, allowing randomness, third parties, and zone pressure to ruin them.

What pros do:

They aim to close fights fast – first shots, aggressive angles, and decisive tracking to eliminate uncertainty.

🎯 **The longer it lasts, the more chances you give the game to screw you.**

PRO TIPS TO LEVEL UP YOUR GAME

Technique #1: Cover-to-Cover Movement

What it is:

Moving from cover to cover while rotating, never exposing yourself across open fields.

Why pros use it:

Open-field rotations are death traps. Pros path rotations through solid cover to limit exposure to beams and snipers.

How to do it:

Use UAVs and pings to plan rotation routes.

Chain rocks, vehicles, and buildings to stay behind cover.

Avoid crossing more than 30 meters without hard cover.

Rotate on zone edges when possible.

In-Game Scenarios:

- Rotating between compounds.
- Crossing open hills with limited cover.
- Avoiding sniper holds during high lobby matches.

Training Drills:

Simulate 20 safe rotations on known maps.

Mark cover points every 50 meters and practice connecting them.

Run live drills dodging sniper beams while rotating.

Coaching Warning:

Open ground greed almost always results in fast squad wipes.

Pro Level Upgrade:

Use gas masks to rotate late along zone edges, skipping open fields entirely.

Pro Note:

Speed doesn't save you – cover does.

🎯 **Technique #2: Rooftop Edge Dancing**

What it is:

Maintaining rooftop cover while peeking edge lines aggressively for beams.

Why pros use it:

Pros avoid full rooftop exposure while maximizing angle control on rotating enemies.

How to do it:

Hug rooftop edges while maintaining rear cover.

Only peek head-glitch angles for beams.

Backpedal instantly if sniper pings appear.

In-Game Scenarios:

- Holding downtown rooftops.
- Late zone vertical fights.
- Gatekeeping rotations into urban zones.

Training Drills:

Practice 20 rooftop peeking drills.

Simulate snap-back drills on sniper beams.

Train squad crossfire angles while edge dancing.

Coaching Warning:

Overcommitting to full roof exposure invites sniper wipes.

Pro Level Upgrade:

Drop claymores or mines on ladder access to prevent flanks.

Pro Note:

Peeking isn't standing still – it's controlled aggression

🎯 Technique #3: Ledge Cancel Peeking

What it is:

Quick peeking ledges to gather info without full exposure.

Why pros use it:

Pros minimize visual exposure while scanning rooftops or open fields.

How to do it:

Edge forward in short micro-taps.

Use crouch + ADS to limit upper body exposure.

Pull back instantly once target acquisition completes.

In-Game Scenarios:

- Scouting rooftops safely.
- Peeking ridge lines late game.
- Clearing windows without body exposure.

Training Drills:

Practice 50 ledge tap-peeks in Creative drills.

Simulate sniper spot detection while peeking ledges.

Train peek-release rhythm under pressure.

Coaching Warning:

Extended ledge holds turn into free headshots.

Pro Level Upgrade:

Chain peek taps with snapshot reads before full pushes.

Pro Note:

Survival isn't luck – it's exposure control.

You just unlocked what most players ignore.

But this isn't where it ends.

Ready to level up your entire game?

- ✓ Smarter fights
- ✓ Cleaner rotations
- ✓ Faster decisions under pressure
- ✓ Real strategies that actually work
